

## **Test plan**

**Test scope:** The goal is to make sure that system logs out only users who has active debit card. Test cases covering login/logout, cards verification should be executed.

**Test strategy:** two different accounts should be used for testing – one with active card and another with inactive card. Pass criteria – user with active card is logged out after being inactive on web for 5 min. Fail criteria – user without active card is logged out after being inactive on web for 5 min/user with active card isn't logged out after being inactive on web for 5 min.

**Test automation:** create test covering feature.
